

Application Note – AN-1402

Pinovo® PiSys™ 100 – Lifting

Pinovo advises to lift PiSys™ 100 closed loop grit blasting systems in an approved lifting basket. All lifting operations should be executed by qualified personnel and by using approved and inspected lifting equipment. The PiSys™ 100 closed loop grit blasting systems must be depressurized prior to any lifting, moving, or transporting. It is furthermore advised to empty the system for both abrasive grit and waste prior to relocation.

In case, lifting in a basket is not possible, the fork pockets may be used as four lifting points (see picture below). Prior to lifting, the PiSys™ 100 frame and fork pockets need to be inspected for damages. The PiSys™ 100 needs to be balanced properly during the lifting operations.

Local rules and safety regulations need to be followed.
